RE: Community Relations Plan for Colbert Landfill

Dear Mr. Thompson:

Mike Blum and I are asking that you begin considering the types of community relations activities necessary during the remedial design and remedial action (RD/RA) stage of the Colbert Landfill cleanup.

A copy of the "Community Relations Plan for Remedial Investigation and Feasibility Study at Colbert Landfill" is enclosed. This document was written in February of 1985 as an outline to community relations efforts and community concerns during the remedial investigation and feasibility study (RI/FS). Now that the cleanup process has shifted to the RD/RA, it is necessary to update, or possibly re-write this document to ensure that the community relations needs of area residents continue to be addressed. For example: how often should public hearings be held and how often should fact sheets be published? We are aware from past activities that the Colbert community appreciates and desires more than a "minimal" community relations effort. If concerns have changed considerably since the original community relations plan was developed, an entirely new plan may need to be written.

Mike and I will be contacting you soon to get your input on this issue so we can move forward on this task. A list of individuals receiving this letter has been attached for your information. If you have any questions, Mike Blum can be reached at (206) 438-3043. I can be reached by calling (206) 438-7366, or we can both be reached toll-free at 1-800-458-0920.

Sincerely,

Charles C. Matthews

COMMUNITY RELATIONS PLAN
for
REMEDIAL INVESTIGATION/FEASIBILITY STUDY
at
COLBERT LANDFILL
COLBERT, WASHINGTON

Prepared by:
Hazardous Waste Remedial Action Section
Remedial Action Division
State of Washington
Department of Ecology
Olympia, Washington 98504

REMEDIAL INVESTIGATION/FEASIBILITY STUDY
COMMUNITY RELATIONS PLAN

A. Background

In September 1968, Spokane County opened the thirty-acre Colbert Landfill which is located north northeast of the city of Spokane. The old Colbert Township dump is adjacent to the new landfill's south side. Over a five-year period Key Tronic Corporation used this landfill as a disposal site for their spent industrial solvents. As much as 400 gallons per month of these wastes were dumped into different cuts which were filled with municipal refuse. The landfill has become a source of contamination for a regional aquifer that supplies local private wells. The wells in the vicinity of the landfill are currently being monitored for 1,1,1-trichloroethane and trichloroethylene contamination by a contractor of the Spokane County Utilities Department (SCUD). Three homes where well contamination has been documented are provided with bottled drinking water by Key Tronic Corporation and Spokane County. The landfill is currently used for municipal wastes, and has a remaining life of approximately two years.

Spokane County Utilities hired George Maddox and Associates and James M. Montgomery to complete a three-phased study of the hydrogeology of the landfill site. In November 1981, the first study phase, which developed a conceptual model of the subsurface hydrogeology, was completed. Phase II consisted of drilling and sampling water quality of monitoring wells. This phase was completed in June 1982. Phase III was conducted to monitor a complete hydrologic cycle for this area and was completed January 1984.

In June 1983, at a meeting in Spokane, representatives of EPA and WDOE agreed that CH2M Hill would prepare a Remedial Action Master Plan (RAMP) covering feasibility studies and remedial action design. This RAMP, prepared using information obtained from prior studies, was distributed on August 8, 1983.

In late August 1983, the Spokane County Commissioners approved a new water service to the area near the landfill site. The Colbert and Whitworth Water Districts have merged, and in conjunction with the WDOE, DSHS, Key Tronic, and SCUD, will supply the homes in the area with an alternate water supply. The water system will serve as an Initial Remedial Measure (IRM) for the Colbert Landfill Superfund site.

B. Community Concern

In October 1980, a resident near the landfill complained to the Eastern Regional Office of WDOE and SCUD that hazardous materials were being disposed of at the landfill. An investigation of this complaint resulted in the discovery of Key Tronic Corporation's disposal of a

50:50 mixture of 1,1,1-trichloroethane and methylene chloride. From 1975 to 1980, when this disposal practice was discontinued, Key Tronic Corporation poured between 200 to 400 gallons monthly of this solvent mixture on top of municipal refuse.

The Spokane County Utilities Department initiated an investigation into the extent of the groundwater contamination at their landfill site. An interagency committee was formed to hire a consultant to do the investigation. The committee consisted of representatives from WDOE, SCUD, DSHS, and the Spokane County Health District. In April 1981, SCUD retained George Maddox and Associates, Inc. to undertake a three-phased study of the hydrogeology at the landfill site. Mr. Damon Taam, from SCUD, organized and implemented a community relations program for the Utilities Department in conjunction with the Maddox study. Mr. Taam identified a potential group of concerned citizens by obtaining the tax assessor's printout of the residences in the four sections abutting the Colbert Landfill. (See Appendix 1, A-1.) Mr. Taam maintained a record of the concerned individuals who called with questions on the Colbert site, and used this as his initial mailing list. Individuals who attended the public meetings held on the Colbert Landfill issue, were incorporated into the mailing list. Mr. Taam sent notices of the public meeting to these individuals. A sample of one of these notices is found in (A-2). The final mailing list of concerned individuals is found in (A-3). Attendance at these meetings was as high as 80 to 100 people.

Representatives from agencies interested in the landfill problem, attended the public meetings. Mr. Claude Sappington and Mr. Jim Malm from the Washington Department of Ecology Spokane Regional Office, Mr. George Slender from the Spokane Department of Social and Health Services, and Mr. John Anicetti from the Spokane County Health Department, were among the public officials in attendance at these meetings. The Spokane County Commissioners have attended some of the following meetings, and held open County Commission meetings on this issue. A list of the dates and principal individuals involved in these meetings is found in A-4.

On May 5, 1981, in the Spokane Public Health Center Building, Mr. Taam held his first public meeting on the Colbert Landfill issue. The purpose of the meeting was to explain what the Maddox study was going to accomplish. He told the individuals in attendance how the study was attempting to define the magnitude of the groundwater contamination. Mr. Taam discussed why the Phase I hydrogeological study was necessary. The greatest concern of the individuals in attendance was whether their water was safe to use.

On December 1, 1981, a public meeting was held in the Spokane Public Health Center, and on December 3, 1981, a public meeting was held in the Colbert Water District Building. Copies of the news release announcing the December 1st meeting, and the notice mailed to concerned citizens informing them of the December 3rd meeting, are found on A-6 and A-7 respectively. At these meetings, Mr. Taam presented

the results of the Phase I study. The major question voiced by the participating citizens was over the need of additional study of the problem. These individuals felt that the correct course of action would be to bring in a new water supply immediately.

On February 3, 1982, a public meeting was held in the Colbert Water District Building. Mr. Taam discussed the purpose and scope of the work to be done in Phase II of this study. On October 14, 1982, the well testing schedule for the 24 individuals involved in the well sampling program was established. At this public meeting held in the Colbert Water District Building, Mr. Taam explained the chart of the previous well samples' results. An updated chart of the test results of the water samples from the residents' and test wells, was posted in the Colbert Water District Building. A map showing the location of all the wells in the sample program, was posted next to the current chart of sampling results. The citizens in attendance were concerned as to the potential health impacts from the data presented. The affected homeowners were interested in establishing the magnitude of their economic loss due to the groundwater contamination.

The February 24, 1983, public meeting in the Colbert Water District Building was attended by Dr. Mary Luther, Director of the Spokane County Health District. Mr. Taam presented the technical results from the Phase II study. Dr. Luther addressed the questions on the health impact of these results. Residents of homes where the sampling program showed well water contamination were advised to use bottled water for drinking purposes. Three of these homes were not engaged in litigation with the potentially responsible parties, and were provided bottled water by Key Tronic Corporations' and Spokane County's contractor, Culligan. The (b) (6) and (b) (6) began receiving bottled water on March 22, 1983. The (b) (6) started receiving bottled water in July 1983. In the Health District's opinion, these homes could use their well water for non-drinking purposes. Mr. Taam explained the purpose of the Phase III study, which had started in January 1983. In addition to posting the water sampling results at the information repository at the Colbert Water District Building, Mr. Taam stated he would personally send each homeowner in the well sampling program all of the test results. The mailing list used to distribute this data is found on A-5, with a sample letter on A-8.

The final public meeting of this series was held March 21, 1983, in the Colbert Water District Building. Mr. Taam presented the available information from Phase III of the study. The county tax assessor, Mr. George Burton, was present to discuss the reassessment of the homes affected by the groundwater contamination. These properties were subsequently devalued and the respective property taxes were discounted from 10% to 30%.

(b) (6), a local resident, has organized the residents of homes surrounding the landfill, and has acted as the spokesperson for the group. (b) (6) attended all of the SCUD meetings, as well as the County Commissioner's meetings which addressed the Colbert issue. When the homeowners became frustrated by the absence of an immediate plan for an alternative water system, (b) (6) held the

"Basement Water District Meetings." All of the water districts interested in serving the Colbert Landfill area came to these meetings to make a presentation on their service. Many of these districts were eliminated from consideration by SCUD, due to technical and legal problems with their prospective service of the Colbert Landfill site.

C. Objectives of Community Relations Plan

The general objective of the community relations program is to exchange information between the government agencies trying to understand and solve the contamination problem and the public.

Specific objectives include:

- ° Monitor public concerns and information needs throughout the study. Provide consistent, understandable information to the public in response to identified needs. Provide a means for the public to express concerns and make inquiries. Ensure that this information exchange is sufficient for the public to evaluate and respond to study activities and findings.
 - ° Identify environmental, public interest, or other groups that may become interested in the site as work progresses. Provide interested parties with information about the study, and with a means to express concerns and make inquiries.
 - ° Provide the media with timely, detailed, accurate information during the remedial investigation/feasibility study.
 - ° Provide concerned agencies and elected officials with information regarding the scope, progress, and findings of the remedial investigation/feasibility study. Agencies include:
 - State of Washington Department of Ecology
 - EPA
 - Spokane County Utilities Department
 - Spokane County
- Provide citizens, agencies, elected officials, and interested parties an opportunity to comment on remedial action alternatives identified in the feasibility study, prior to final selection of a remedy. A three-week public comment period will be provided.
- ° Modify the community relations plan as necessary to respond to community concerns and needs.

D. Community Relations Techniques

The Community Concern section presents a variety of community relations activities which have been implemented at this site.

- An information repository was established at the Colbert Water District Building.
- Fact sheets on the well samples' test results were sent to the wells' homeowners.
- Formal public meetings were held by the Spokane County Utilities Department and by the County Commissioners. An interagency panel was available to answer questions and present information at the County Utilities' meetings.
- Informal public meetings were held at (b) (6) near the Colbert Landfill site. Public officials were invited, and attended these meetings.
- Information was available upon request, to the media from the County Utilities Office and the County Commissioners. A file of the newspaper articles on this site is kept at WDOE and at the Spokane County Utilities office. A press release was given on November 6, 1983, to the Spokane Spokesman Review. The information it contained on the alternative water system selected was included in an article by Ken Sands entitled, "Water Crisis Drags On." In addition, (b) (6) letter on the chosen alternative was mailed directly to concerned citizens. Public comments on this alternative have been addressed by Mr. Damon Taam during the past six months.

The following techniques will be used to address community concerns through completion of the RI/FS.

- Information repositories will be established at Spokane County Utility District Office, and the Colbert Post Office, and the WDOE Eastern Regional Office.
- Fact sheets will be sent to the information repositories and to everyone on the mailing lists.
- Public meetings will be held at the Colbert Water District Building before work on the RI/FS begins, at major decision points throughout the project, and at completion of the RI/FS.
- A press release will be issued with fact sheets before all public meetings.
- Local, state and federal elected officials will be provided with information throughout the project.
- Data collected from private wells will be sent to the well owners in a timely and easily understood manner.

E. Work Plan and Schedule

The following work plan outlines the community relations tasks to be completed during the RI/FS process. The tasks are outlined in sequence and are scheduled in accordance with the major work activities presented in the Scope of Work developed for this site.

	<u>TASKS</u>	<u>TIME FRAME</u>
Task 1:	<u>Develop and Maintain a Mailing List</u>	<u>Prior to Project Initiation</u>
	<p>The site Project Manager will develop and maintain a mailing list of interested state and local officials, local news media, businesses or residents in the area around the site, and interested citizens.</p> <p>The individuals listed on Appendix I, II and III comprise the mailing lists for pertinent information on this site.</p> <p>Additional interested citizens groups, and property owners or residents in the site vicinity, will be added to this list upon an expressed interest in the site.</p>	
Task 2:	<u>Fact Sheet</u>	<u>Prior to Field Work</u>
	<p>The WDOE Project Manager for this site will prepare a Fact Sheet for distribution prior to the initial news release, to the mailing list, at information meetings, and at the information repositories at Spokane County Utility Office, the WDOE Eastern Regional Office and the Colbert Post Office.</p>	
Task 3:	<u>News Release</u>	<u>Prior to Field Work</u>
	<p>WDOE will prepare an initial news release announcing the investigation. The fact sheet will be used as a basis for the release and will be sent to all media contacts. The release will include the name and phone number of the WDOE Project Manager.</p>	
Task 4:	<u>Information Meetings</u>	<u>On-Going</u>
	<p>The Project Manager will update local officials and citizens during preparation and after completion of the RI/FS. Informal but publicized meetings will be held during the comment period on the RI/FS to obtain oral comments and provide information to citizens.</p>	

Task 5: Information Repositories Prior to Field Work

WDOE will arrange for public documents relating to the project to be available to the public at designated repositories, including the Eastern Regional WDOE office, Spokane County Utility Department Office, and the Colbert Post Office.

Task 6: Fact Sheet on Prior to Field Work
RI Scope of Work

The WDOE Project Manager will prepare and distribute to the mailing list a fact sheet on the Scope of Work for the Remedial Investigation.

Task 7: Fact Sheet and News Release At Completion of RI

Two weeks prior to the start of the public comment period, WDOE will prepare a fact sheet and news release briefly summarizing the RI/FS, and announcing the three-week comment period, a public meeting, and the document's availability for public review at the designated repositories. In addition, notices of the comment period will be sent to the mailing list. The notice and news release will state where comments are to be sent.

Task 8: Responsiveness Summary After Public Comment Period

A responsiveness summary will be prepared and distributed to the mailing list at the end of the public comment period.

Task 9: News Release When Alternative is Selected

WDOE will prepare a news release announcing the selected alternative.

E. Budget and Staffing Plan

FOR IMMEDIATE RELEASE

On Tuesday, November 24, 1981, the Board of County Commissioners signed a contract with George Maddox and Associates for Phase II of the Colbert Hydrogeologic Study (Phase II Mica to follow shortly). Phase I of the Hydrogeologic Report has been completed and recommends proceeding with the Phase II Scope of Work. Phase II involves tasks such as water sampling, well drilling and the recommendations for possible remedial actions. Funds from the E.P.A., D.O.E. and the County Utilities budget will be used for the study. A public meeting will be held on December 1, 1981, at 7:00 p.m. in the Spokane County Health District Building Auditorium, W. 1101 College. Items to be discussed will involve Phase I findings and Phase II objectives.

To Whom It May Concern:

A small informal public meeting will take place on December 3, 1981 in the Colbert Water Dist Building, E. 4403 Colbert Rd at 7:00 pm. The meeting topic concerns the Spokane County Hydrogeologic Study in the Colbert Landfill area.

Agenda items are as follows:

- 1) Introduction of consultants and personnel
- 2) Reiteration of Phase I findings and Phase II Objectives
- 3) Plans for water sampling, drilling and surveying
- 4) Questions and answer period
- 5) Appointment scheduling for sampling wells

If there are any questions concerning this matter, please do not hesitate to call me at 456-3604.

Sincerely,

William R. Dobratz, P.E.
Utilities Director

On _____ your well was sampled for detection of the chemical 1,1,1-Trichloroethane. The sample was taken by the firm George Maddox and Associates and tested by ABC Laboratories, Inc. The detectable limits of the testing equipment used are established at one part per billion (1 ppb) or one micro-gram per liter ($\mu\text{g}/\text{l}$), all values stated less than 1 ppb are considered non-detectable. The amount of 1,1,1-Trichloroethane established by ABC Laboratories, Inc. was _____.*

If there are any questions regarding this test, please do not hesitate to call our office at 456-3604.

Sincerely,

William R. Dobratz, PE
Utilities Director
